

Overview

The State of Delaware Enterprise GIS (FirstMap) system serves as a central repository for commonly used GIS data layers including, but not limited to, the framework layers used in base maps and aerial imagery. The system supports services connected to the central repository. The data in these services can be added to maps, used within applications and utilized in ArcGIS Online Web Maps. The automated replication processes ensure that the data in the services are the most current data available.

This document provides high level information about the system and key links for reference.

Map and Feature Services Instructions

To connect to the map and feature services in ArcMap:

1. From ArcMap or ArcCatalog, select '**Add ArcGIS Server**'.
2. Select '**Use GIS services**'.
3. For the Server URL enter: <http://firstmap.delaware.gov/arcgis/>
4. Open the connection and begin using services.

To utilize the map and feature services through a browser or in an application:

- From any browser go to: <http://firstmap.delaware.gov/arcgis/rest/services>
- FirstMap also supports https services.

ArcGIS Online

- To access the public facing portion of Delaware's ArcGIS Online Portal, go to <http://delaware.maps.arcgis.com/home/>.
